DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 2, 6-9, 25-26, and 29-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Webber (U.S. 6,561,960). Referring to claim 1, Webber discloses a frame, a movement arm (28) pivotally attached to the frame and movable along a generally longitudinal stroke path between a forward and rearward position, a resistance imparting unit (weights) operatively connected with the movement arm to provide resistance, a pair of handles (44) to be grasped by the user, a pair of extension members (41), each of which is attached to a respective handle such that each handle is free to rotate about a longitudinal axis of the extension member, wherein the extension members are attached to the movement arm such that each extension member is free to rotate relative to the movement arm about vertical, longitudinal, and transverse axes, and wherein the extension members are of sufficient length and the extension members are attached to the movement arms so that the handles can be separated by a distance of at least 24 inches when the movement arm is in the

Application/Control Number: 09/886,413

Art Unit: 3764

rearward position. (Flexibility of extension members allow for any distance between handles).

- 3. Referring to claim 2, Webber discloses use of a weight stack (figs. 7a, 7b).
- 4. Referring to claims 6-9, Webber teaches a four bar linkage which can be used to vary resistance, a swing link connected to the frame, and a pulley in conjunction with the swing link, the pulley carrying a belt connected to the resistance imparting unit.
- 5. Referring to claim 25, 26, and 29-32, Webber discloses the claimed invention as cited in the above paragraphs. Furthermore, Webber discloses a seat member attached to the frame.

Claim Rejections - 35 USC § 103

6. Claims 3-5, 10-24, and 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Webber. Webber has disclosed the claimed structural limitations as discussed above. Limitations drawn to specific size ranges of the extension members are considered a matter of obvious design choice within the knowledge of the skilled artisan, as the skilled artisan would select extension member lengths based on suitability for intended use. Furthermore, limitations drawn to the use of ball bearing joints or rotary joints are also considered matters of obvious design choice, as the Webber device allows free rotation in longitudinal, transverse, and vertical axes. The use of rotary and ball joints are considered art recognized alternatives or equivalents to the configuration taught by Webber.

Ĵ

Response to Arguments

7. Applicant's arguments with respect to claims 1-16 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Barnhill U.S. 1,205,426

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fenn C Mathew whose telephone number is (703) 305-2846. The examiner can normally be reached on Monday - Friday 9:00am - 5:30pm.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
